**Support on-demand, user content translation on your RSA Archer® instance creating a truly common language for your RSA Archer® users around the globe!**

## Business Process Overview

RSA Archer®'s globalization features support Archer® user interface in various languages to meet the needs of different regions. While various language translations for both the user interface and solution content are provided by RSA, on-demand user content translation was beyond the reach of organizations engaging users in different geographical regions until now.
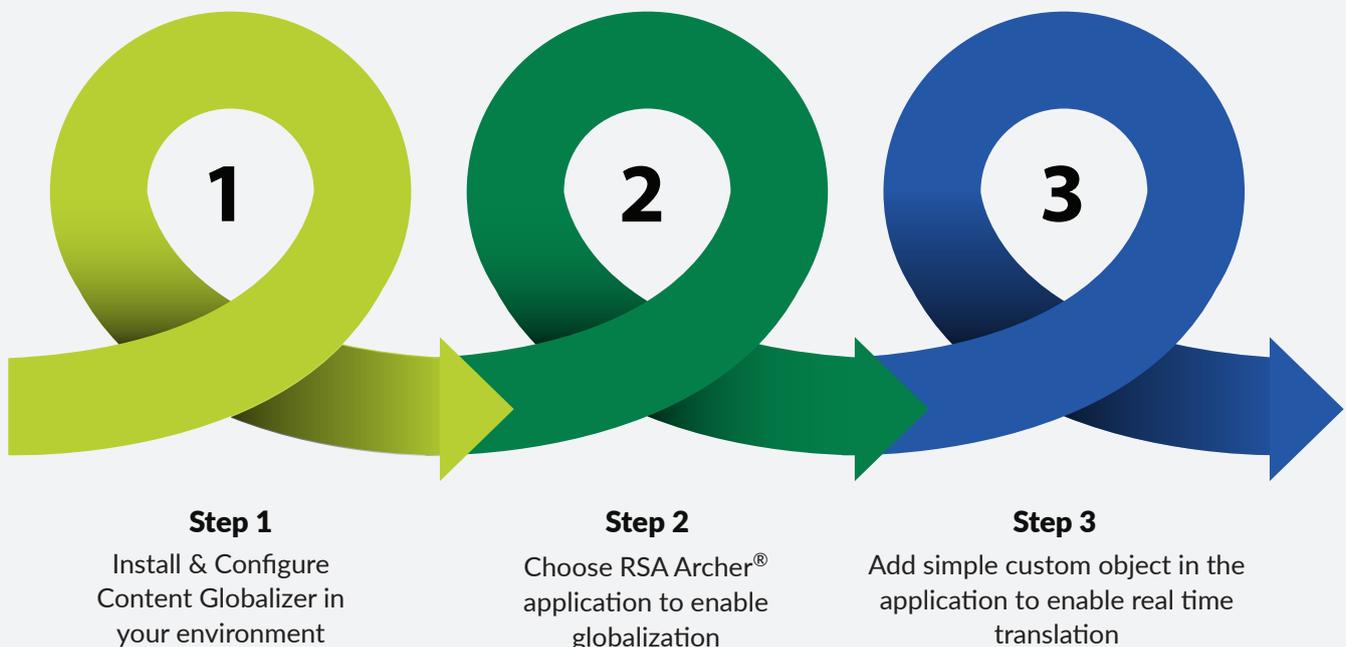

## Content Globalizer

Leverage latest cutting-edge technologies to completely adapt your RSA Archer® instance to various languages and regions without engineering and configuration changes.

Translate any user content from RSA Archer® into one of over 100 languages on demand in a world where multilingualism is quickly becoming the norm.

> "If you talk to a man in a language he understands, that goes to his head. If you talk to him in his own language, that goes to his heart."
>
> -Nelson Mandela

## Content Globalizer Process Flow

**1**

**2**

**3**

**Step 1**
Install & Configure Content Globalizer in your environment
